

Reef Mates

Find out the special relationships between some of the reef creatures that are found on the Great Barrier Reef.

Draw a line to match up each reef mate.

Clues

My reef mate looks like a sausage and crawls along the seafloor. You won't see me as I hide inside my reef mate.

My reef mate helps to keep me clean and swims inside my mouth and gills.

I come out at night to clean my reef mate. My reef mate is a long slender fish.

Millions of us live inside the fleshy body of our reef mate. Our reef mate has two big shells.

I live amongst the stinging tentacles of my reef mate.

My reef mate is very small. It has many legs and can be found hiding amongst my stinging tentacles.
